

MAHA RAJAN K

Energy Engineer

7530079811 | maharajangece@outlook.com | [LinkedIn](#)

EDUCATION

College of Engineering Guindy, Anna University M.E.Energy Engineering (1st Year)	Chennai, Tamil Nadu 2024-2026
Government College of Engineering B.E.Mechanical Engineering CGPA 7.5	Tirunelveli, Tamil Nadu 2020-2024

INTERNSHIP

Oil and Natural Gas Corporation of India - Gained practical exposure in oil exploration and production. - Operated on oil rigs and used various tools for routine maintenance.	Karaikal, Puducherry
Brakes India Private Limited - Experienced the manufacturing and assembly processes of brake systems. - Applied tools and techniques to ensure the performance and safety standards.	Chengalpattu, Tamil Nadu

PROJECTS

Detection of Ammonia Gas in Poultry Farms - Developed a real-time ammonia detection system to enhance farm safety. - Designed sensor circuitry and programmed a microcontroller for data logging.	May 2024
Design and Fabrication of Electric Bicycle - Led a team in designing and assembling a fully functional electric bicycle. - Handled system integration, testing, and optimization.	June 2023
CO Detector & Automatic Window Opener in Car - Designed a system to monitor CO levels and automate car window functions. - Focused on automation, vehicle safety, and sensor-based control integration.	April 2023

ACHIEVEMENTS

HONOURABLE MENTION at IITMRP LEAP Inter-Collegiate Open House Project Title: CO Detector & Automatic Window Opener in Car Role: Mechanical Assembly, Testing, Analysis Project Duration: 1 year - Represented the project to entrepreneurs, industry veterans, and academia. at IITMRP - Engaged in professional networking and gained insights into industrial innovations.	IIT Madras Research Park April 2023
---	--

SKILLS

- Computational Fluid Dynamics (CFD):** Hands-on experience with simulating heat transfer and fluid flow using ANSYS Fluent, especially for energy-related applications.
- Energy Auditing & Management:** Familiar with energy audit practices and identifying ways to improve the efficiency of mechanical systems.
- Thermal & Fluid System Analysis:** Worked on problems involving conduction, convection, and radiation using both analytical methods and simulation tools.
- ANSYS Fluent & APDL:** Comfortable with setting up geometries, creating meshes, running simulations, and analyzing results for thermal and fluid systems.
- Renewable Energy Systems:** Studied and analyzed the performance of solar, wind, and bioenergy systems as part of academic and lab work.
